

A100-SXM4-40GB | Qwen3-30B-A3B MoE layer | each partition run alone on 54 SMs, BLOCK_SIZE_M=128, 3 passes | 8 curves: cold and hot, at splits of 16, 32, 64 and 96 cold experts (2.9% to 57.8% of the tokens).

Cold and hot differ in LEVEL by 1.77x, and not at all in SHAPE. On log axes (a) a pure level difference is a vertical offset; a different knee would be a different slope. In (b) all eight curves cross +2% at 1110 MHz and +20% at 1245 MHz, with zero spread; +5% and +10% vary by one grid step.
